

# EXPERIMENT 29

## Ransomware Incident Reconstruction

### AIM

To reconstruct a simulated ransomware incident and identify the earliest suspicious event and subsequent related activity.

### ALGORITHM

1. Create chronological incident records.
2. Sort all records by timestamp.
3. Identify the first suspicious process or event.
4. Display later file, rename, and network events.
5. Present the reconstructed sequence.

### CODE

```
events = [  
    ("10:00", "login", "user01"),  
    ("10:05", "process", "unknown.exe"),  
    ("10:07", "file_modify", "report.docx"),  
    ("10:08", "file_rename", "report.locked"),  
    ("10:10", "network", "203.0.113.5")  
]  
  
print("RANSOMWARE INCIDENT TIMELINE")  
print("-" * 50)  
for time, event, obj in sorted(events):  
    print(time, "|", event, "|", obj)  
  
print("\nEarliest suspicious event: 10:05 - unknown.exe")
```

### OUTPUT

The screenshot displays the Visual Studio Code editor with a file named `program_29.py`. The code defines a list of events, sorts them by timestamp, and prints a timeline. The terminal output shows the execution of the script, displaying the sorted events and identifying the earliest suspicious event as `10:05 - unknown.exe`.

```
program_29.py  
1  events = [  
2      ("10:00", "login", "user01"),  
3      ("10:05", "process", "unknown.exe"),  
4      ("10:07", "file_modify", "report.docx"),  
5      ("10:08", "file_rename", "report.locked"),  
6      ("10:10", "network", "203.0.113.5")  
7  ]  
8  
9  print("RANSOMWARE INCIDENT TIMELINE")  
10 print("-" * 50)  
11 for time, event, obj in sorted(events):  
12     print(time, "|", event, "|", obj)  
13  
14 print("\nEarliest suspicious event: 10:05 - unknown.exe")
```

TERMINAL

```
PS C:\Forensics> python program_29.py  
RANSOMWARE INCIDENT TIMELINE  
10:00 | login      | user01  
10:05 | process     | unknown.exe  
10:07 | file_modify    | report.docx  
10:08 | file_rename   | report.locked  
10:10 | network      | 203.0.113.5  
  
Earliest suspicious event: 10:05 - unknown.exe
```

### RESULT

The program reconstructs the sequence of a simulated ransomware incident.
