

# EXPERIMENT 40

## Complete Digital Forensic Case-Reporting System

### AIM

To create a structured digital forensic case report containing case information, evidence, hashes, examination activities, timeline, findings, conclusions, and recommendations.

### ALGORITHM

1. Enter the case identifier and investigator.
2. Enter evidence description and acquisition details.
3. Record file metadata and hash values.
4. Enter examination activities and timeline events.
5. Enter findings, conclusion, and recommendations.
6. Validate essential fields.
7. Generate the final structured case report.

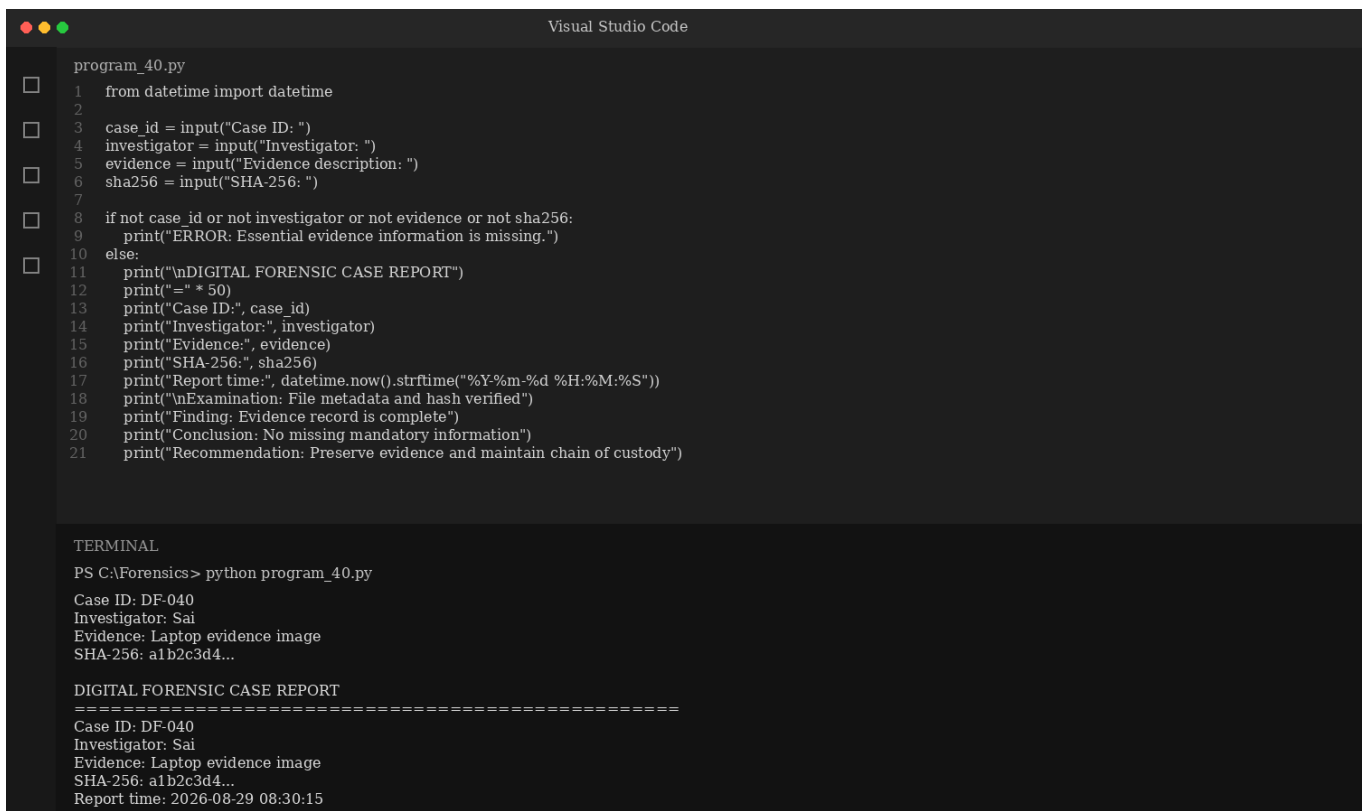

### CODE

```
from datetime import datetime

case_id = input("Case ID: ")
investigator = input("Investigator: ")
evidence = input("Evidence description: ")
sha256 = input("SHA-256: ")

if not case_id or not investigator or not evidence or not sha256:
    print("ERROR: Essential evidence information is missing.")
else:
    print("\nDIGITAL FORENSIC CASE REPORT")
    print("=" * 50)
    print("Case ID:", case_id)
    print("Investigator:", investigator)
    print("Evidence:", evidence)
    print("SHA-256:", sha256)
    print("Report time:", datetime.now().strftime("%Y-%m-%d %H:%M:%S"))
    print("\nExamination: File metadata and hash verified")
    print("Finding: Evidence record is complete")
    print("Conclusion: No missing mandatory information")
    print("Recommendation: Preserve evidence and maintain chain of custody")
```

### OUTPUT

```
program_40.py
1  from datetime import datetime
2
3  case_id = input("Case ID: ")
4  investigator = input("Investigator: ")
5  evidence = input("Evidence description: ")
6  sha256 = input("SHA-256: ")
7
8  if not case_id or not investigator or not evidence or not sha256:
9      print("ERROR: Essential evidence information is missing.")
10 else:
11     print("\nDIGITAL FORENSIC CASE REPORT")
12     print("=" * 50)
13     print("Case ID:", case_id)
14     print("Investigator:", investigator)
15     print("Evidence:", evidence)
16     print("SHA-256:", sha256)
17     print("Report time:", datetime.now().strftime("%Y-%m-%d %H:%M:%S"))
18     print("\nExamination: File metadata and hash verified")
19     print("Finding: Evidence record is complete")
20     print("Conclusion: No missing mandatory information")
21     print("Recommendation: Preserve evidence and maintain chain of custody")

TERMINAL
PS C:\Forensics> python program_40.py
Case ID: DF-040
Investigator: Sai
Evidence: Laptop evidence image
SHA-256: a1b2c3d4...

DIGITAL FORENSIC CASE REPORT
=====
Case ID: DF-040
Investigator: Sai
Evidence: Laptop evidence image
SHA-256: a1b2c3d4...
Report time: 2026-08-29 08:30:15
```

### RESULT

The program validates essential case information and generates a structured digital forensic case report.
